

Cyber Threats against Generation Units

- Production process not the main issue
 - Robust components / no network connections
- Information leakage facilitated by
 - items like printers, video conference equipment, USBs, etc
 - but the vast majority are “phishing attacks”
- The risk of Cloud services should be acknowledged vs. work efficiency
- We see slight decline in incidents generally

About Measures

- Zone principle is robust
- We perform penetration tests regularly
- Security vetting is introduced more broadly. Education also.

Comment

- We see a lack of harmonisation between stations
